

A.A.A. ACHILLE A.A.A. ACHILLE

After the death of his father, Achille becomes afflicted with dysphemia, but he is also gifted with great creative intelligence. In their attempts to solve the boy's problem, his family have him admitted to Villa Agorà, a summer clinic directed by Doctor Aglieri, the inventor of the "talk/sing" method, which consists in helping his bizarre patients to talk by teaching them to modulate their voices as if they were singing.
